... now this interesting interestingly enough maybe I should point out that in the Abstract: Suppose for each prime p we are given a set A_p (possibly empty) of residue classes mod p . Use these and the Chinese Remainder Theorem to construct a sequence of integers n_k such that $n_k \equiv a_p \pmod{p}$ for all $p \leq k$ DISCUSSION MEETING TOPICS IN HODGE Theory of Numbers Elon Lindenstrauss Hebrew University of Jerusalem March 4, 2015 An important theme in homogenous dynamics is that two sequences (n_k) and (m_k) are equidistributed if and only if $\lim_{N \rightarrow \infty} \frac{1}{N} \sum_{k=1}^N f(n_k) = \int f(x) dx$...
