This video is Legacy Tale No. 97046, March 2006, in Prof. Victor M. Ponce's website [ponce.sdsu.edu](http://ponce.sdsu.edu). The video describes the derivation and application of a numerical solution to the shallow water equations using the Vedernikov number, which is defined as the ratio of relative velocity to the wave celerity. Let us consider a small wave propagating in a horizontal channel initially at rest. For an observer travelling with the wave, the flow appears stationary. Reference video: In this video, Prof. Marcos Vianna describes how to calculate the Vedernikov number. Alright, it's time to learn how mathematical equations govern the motion of
